EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ruthleen Uy on 7/15/2008.

The application has been amended as follows:

Claim 26, line 3, "comprising:" has been changed to - - the method comprising: -
- .

Reasons for Allowance

2. Claims 1-3, 6-9, 13, 14, 17-20, 24-29, 31-33 and 35 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Claims 1, 3, 14 and 25 are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose the ICMPv6 redirect message with a flag bit that indicates the processing state of a first NAT-PT apparatus and a target address field which stores the address of a second NAT-PT apparatus adjacent to the first NAT-PT apparatus.

Claims 8, 19 and 26 are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose a redirect message with a flag bit that indicates the state of the NAT-PT apparatus being incapable of processing packets; and a target address field which stores an address of another NAT-PT apparatus.

Claims 27 and 32 are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose receiving a DNS message for searching for an IPv4 address of a destination domain name, transmitting the DNS message to a DNSv4 server, and receiving the IPv4 address of the destination domain name, allocating a predetermined prefix to the received IPv4 address to translate the IPv4 address into an IPv6 address; and transmitting the translated IPv6 address to a corresponding IPv6 node, where the predetermined prefix is the prefix of an apparatus with the least load among the at least one apparatus for transmitting IP packets, the apparatus for transmitting IP packets with the least load being identified by using a predetermined message regarding information on the load of the at least one apparatus for transmitting IP packets.
